The Next Generation UPS System

Power+ is a state-of-the-art modular UPS system based on the *true on-line battery* topology. The Power+'s modular design makes scalability simple; its high power density provides the benefits of a small footprint and low heat dissipation. The Power+'s rich management and communication capabilities include remote monitoring and control over the Internet or via cellphone. Its hybrid static switch ensures high reliability and compliance with IEC standards.

The UPS That Grows With Your Business

Power+ is a true modular, user-upgradeable system. As load increases you can insert up to a total of ten 10 kVA hot-swap plug-in modules, each weighing only 9 kg. The Power+ can be configured in parallel for N+1 or N+2 redundancy.

True On-Line Battery

The Power+ inverter complies with the IEC-62040-3 standard by its ability to take its input power from either the ac input (via the rectifier) or the battery, and supply power to the load. The battery is galvanically connected between the rectifier output and the inverter input on a common DC link (see diagram on the right).

Double Conversion True On-Line Battery (VFI)

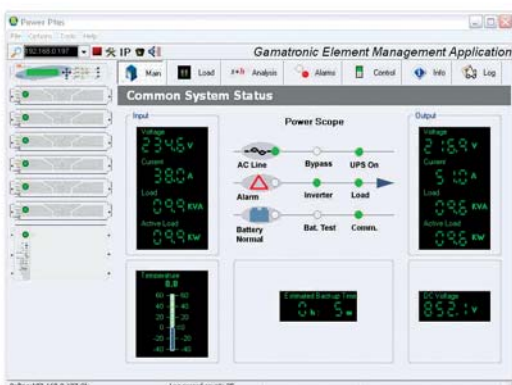

According to IEC 62040-3

Parallel POWER+ Systems

Connecting two or more POWER+ units in a parallel configuration provides increased reliability and/or greater output power capacity. POWER+ units equipped with the optional parallel kit share the load equally.
